

# Classic 4000kg 230V

## 2-Column lift bridge

Model: VL35F230B

Thanks to the well thought-out design of Falco lifts, you save time and effort. Centrally are the ease of use and an efficient work flow. The different models are developed for various applications.

The "Classic" model is a very successful and reliable model. Due to its simple but sturdy structure, the bridge has no weak superfluous components and is extremely durable. Thanks to the new manual sync lock system, the bridge can easily be unlocked on both sides in one go.

**VL35F230B**

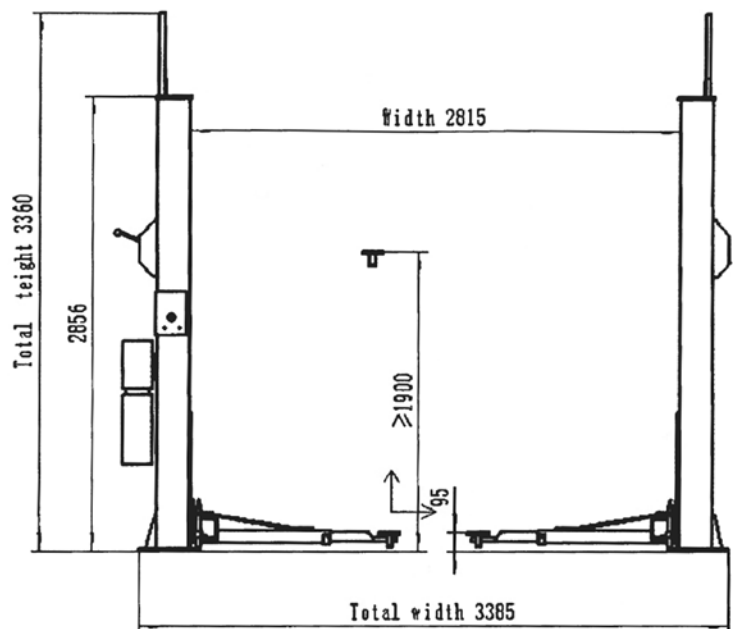

< including height adapter

### General specifications

- double telescopic extendable lifting arms
- sync lock system
- good quality hydraulic pump
- height-adjustable carrier pads
- automatic support arm locking
- fully automatic electric detent
- protective rubbers door stop
- foot protection at every lifting arm
- protective caps on the inside of the columns
- robust columns manufactured from rolled steel
- protective rubbers door stop
- hydraulic cylinder on both sides
- extreme low threshold of 45 mm
- dead man's switch for lifting and lowering
- automatic protection against overcharge
- height limit switch
- 12x heavy m18 security bolts

### Dimensions

### Technical specifications
